
Moolet Total Users 1.0.9 :: Updated 09.16.2007

Posted by brian_williford - 2007/08/14 05:30

Mod Moolet Total User is a widget to track total registered users with mootools and ajax. This version **REQUIRES** Community Builder and Joomla 1.0 only. You can see it in action on the left menu of this site,

You **MUST** create an account and login to download. Once logged in return here and the download button will appear next to the Details button.

Controls:

Verbiage control over members and guest numbers online

Libraries:

Load mootools.1.1.js & use effects - Yes / No

Choose mootools.1.1.js file path (for shared options)

Already have mootools.js in template & use effects - Yes / No

Enable internal CSS presets and load module .css file - Yes / No

Ajax refresh time - In seconds

Image Controls:

Mootools Avatar Fade of Jiggle on Rollover

Mootools Effect Duration

Optional no image substitute

Avatar Width

Avatar Height

Avatar Fade away after no activity

Module checks for uploaded avatar, if known exists it loads the Community Builder "No Image" avatar. If the user has uploaded an image but the image has not been approved then this module displays the Community Builder "Image Pending" avatar.

This may not work on all systems as the Ajax requirements want current server software.

Added subdirectory variable to language file.

Mootools start, rollover and rollout value settings.

Post edited by: brian_williford, at: 2007/09/06 00:50

Changed the way the language file loads

Mootools fade effect now honors the time value

1.0.7 does not work, get rid of it and load 1.0.8 which also has draggable window if you want to use it.
