
Reloads module/complete page in module-div

Posted by jmeyerdo - 2008/02/18 14:22

Hi moolets-team, hi all!

I found your website and moolets today - wow!

Unfortunately the actual "Moolet Moo's Online" is not working with my Joomla 1.5.1. Are there general issues with Joomla 1.5?

I added the module on the top of my page (for testing purposes): <http://neu.evjuccelle.de>. But it reloads the module/the complete page itself in the div several times.

Do you have any hints how to solve or debug this error?

Thanks - and thanks for your great work...
Kind regards, Jens

Hello,

You want to check out the read me here or some of the previous posts about mootools files.

Moolets requires a template using mootools 1.1 or greater. You have a 1.0 script loading in your template:
`/media/system/js/mootools.js`

I would comment that out and turn on the 1.

Also you can not run more then one mootools file at a time.

Hi!

Thank you for your helpful answer.

Sorry, I went throught the forum (-topics) but I was not able to identify other similar requests. Perhaps I was/I am to excited about these great modules but I have not found any README (until now...).

Thank you again for your help - I will go a ahead with mootools 1.1.

Kind regards, Jens

It's me again...

I checked actual Joomla 1.5.1 and as I can see the included mootools.js is the actual version:

```
var MooTools={version:'1.11'};
```

With disabled Joomla-file (and .js-from module) the error disappears but there is no content/refresh.

Kind regards, Jens

o, sorry, those buggers named their file incorrectly, mootools.js means 1.0 and mootools.1.1.js would be 1.1 and so on.

They should be spanked...

I guess it will not run under 1.5 as we have not set it up to do so.

I will try to do some adjustments for that as soon as we are able

sorry

Hi!

Ok - thanks again!

I subscribed to the specific Announcements-threads now.

All the best... Jens
