Hello,

We need the URL of the page with the moolet published so we can do a MooTools trace in Firebug.

thanks

I guess I got there too late as the moolet was gone. Can you publish to a page somewhere and send me the url for that

please. I can be a page not linked off your menu if you dont want the public to hit it

bets I can tell you have your joomla in a subdirectory in stead of at root, you are going to have to play with the sudirectory path fields provided in the moolet admin and see if you can get it to work. It is unable to find a file, maybe the css. Try adding this to the css path

<http://bahantarbiyyah.info/v4/>

try turning off the mootools file include also to see if you can get any further. you can alwasy hard code that into the template if need be
