
Multiple sidebars, multiple images

Posted by puzzled94 - 2008/03/01 02:00

Love the Moolet Ploplet!

I'm putting together a WordPress site with different sidebars for different sections. These are registered in the functions.php file and appear as sidebars in the widgets section (I'm working on a theme based on the default one which I've made more accessible).

I would like each different sidebar to have a different image at the top (there'll be 6 to 8 different sidebars; one section will have two sets of sidebars, right and left)

How do I set up the Moolet Ploplet to put different images on different sidebars?

Keep up the good work.

Brian

Hello,
It has been a while since I wrote that Mootools plug-in for wordpress. If I remember correctly the ploplet just adds the slide action to an existing class. So you could assign whatever image you want in your CSS for that class.

Now I might be remembering wrong. Best thing to do is send the URL of the actual site with the mootools moolet installed so we can see what need be done.
