Hello, Please check previous posts about loading two mootools files, you can not do that. The shoutbox is loading one and the moolet is loading one. The shoutbox mootools.js is wiping out the mootools.v1.11.js functions. You need to put these two modules or differnt pages or comment out this line

yea, something really funning going on with your server. I just went to hit the moolet file directly and the wrong page showed up

[http://www.pinoymattersg.com/modules/mod\\_moolet\\_recent\\_visitors/mod\\_moolet\\_recent\\_visitors.inc.php](http://www.pinoymattersg.com/modules/mod_moolet_recent_visitors/mod_moolet_recent_visitors.inc.php)

that brings up some banners instead
