
Moolet Moo\'s Online Lite 1.0.0 - No Display

Posted by chatstop - 2008/03/03 16:48

Hi

I've read through the forum to try and solve my problem before posting, but to no avail. The module shows up in my joomla site, but never shows any information besides 1.0.0

My site is located at <http://www.chatstop.net/thecomunity>

Any help is appreciated. I also tried the full version of the moolet with no success.

Thanks

John

Seems to have started working after installing Community Builder.

Yes, this module requires community builder as that is where it gets the avatars.

You can run the fireboard version without community builder if you are running fireboard
