## Fatal Error - Who's Online & Live Stats

Posted by mezza247 - 2008/03/10 15:47

---

Installed Fireboard with no probs.

Installed Moolet Fireboard Who's Online & Live Stats with No probs.

Enable module in backend to appear on the left of my site then get following message:

Fatal error: Cannot redeclare class jconfig in /home/sites/mysite.co.uk/public\_html/configuration.php on line 2 .

Soon as I disable the module everything goes back to normal.

Any ideas why this might be happening?

Thanks for looking.

Michael

same for me.

Joomla 1.5.6 Fireboard 1.0.4 in legacy mode

These modules so far only work with Joomla 1.x.x, not 1.5.x
