## Require Once Error.

Posted by Krayzie - 2008/07/03 12:15

---

I was looking for a good whos online module, Found this and I must say it looks amazing. But I cant get it to work. I tried installing the module through the Joomla 1.5 Backend, It said install success and appeared in the module manager list but when I looked on my webpage it said it needed mootools.

I ftp to my site and look in my modules folder, Its not even in their. So I unzip the module and FTP the mod\_moolet\_online to the modules folder. Got some progress with this. I get the slider action now.

Take a look at my site, Heres where I currently am stuck. <http://www.sexyclan.net>

Thanks for assisting.
