## More Than 6

Posted by eradio - 2008/08/18 21:45

---

Is it possible for your Moolet 3D Image Carousel to accomodate more than 6 images?  
How hard would it be to modify your code to do this?  
I am not a programmer by any means, so please be specific if there is a soltuion you can post.  
Thanks

It would be very simple if you are coder. You would simply add more of the paramters in the xml file and the database calls in the php file. Custom work on our end requires time. Writing up the steps unfortunatly takes longer.

It would take about 1/4 hour to make the modification. It might take over an hour to write up instructions.

Even without being a programmer if you open the files you might very well see where there are six parameters for images. You could copy one two more times and change the numbers to 7 and 8.

Take and peek at the code, you might find it easy enough
