
Can Ploplets slide in from right?

Posted by rufus00 - 2008/09/26 15:48

Hi,

Just found 'Ploplets' and feel they could be interesting and fun to use. I am trying to get a Banner to 'slide' in and have various Divs of colour slide in, in a Ploplet style (basic I know).

Some of the Divs are not 100% width and start around 400px from the Left. I tried to have these slide-in BUT whereas the 100% Divs are not there then 'slide in' the Divs that start at 400px sit there on the left then slide into place..

Is there anyway I can have them slide in from the right?

OR if you guys can help with why they appear on the left eventhough I have "mySlide_5.hide();" so they are meant to be hidden - though are clearly not

HTML Code is:

The .js code is:

```
var mySlide_1 = new Fx.Slide('blueline',{wait: true, duration: 2000, transition:Fx.Transitions.Circ.easeOut, mode:
'horizontal'});
var mySlide_2 = new Fx.Slide('pinkline-01',{wait: true, duration: 1900, transition:Fx.Transitions.Circ.easeOut, mode:
'horizontal'});
var mySlide_3 = new Fx.Slide('pinkline-02',{wait: true, duration: 1800, transition:Fx.Transitions.Circ.easeOut, mode:
'horizontal'});
var mySlide_4 = new Fx.Slide('pinkline-03',{wait: true, duration: 1700, transition:Fx.Transitions.Circ.easeOut, mode:
'horizontal'});
var mySlide_5 = new Fx.Slide('pinkline-04',{wait: true, duration: 1700, transition:Fx.Transitions.Circ.easeOut, mode:
'horizontal'});
var mySlide_6 = new Fx.Slide('pinkline-05',{wait: true, duration: 1700, transition:Fx.Transitions.Circ.easeOut, mode:
'horizontal'});
var mySlide_7 = new Fx.Slide('thetitle',{wait: true, duration: 1700, transition:Fx.Transitions.Circ.easeOut, mode:
'horizontal'});
```

```
mySlide_1.hide();
mySlide_2.hide();
mySlide_3.hide();
mySlide_4.hide();
mySlide_5.hide();
mySlide_6.hide();
mySlide_7.hide();
```

```
mySlide_1.slideIn().addEvent('onComplete', function() {
mySlide_2.slideIn().addEvent('onComplete', function() {
mySlide_3.slideIn().addEvent('onComplete', function() {
mySlide_4.slideIn().addEvent('onComplete', function() {
mySlide_5.slideIn().addEvent('onComplete', function() {
mySlide_6.slideIn().addEvent('onComplete', function() {
mySlide_7.slideIn();
});
});
});
});
});
});
});
});
```

Thanks for your help in advance guys.

Rufus

These moolets where written a year ago with mootools 1.1 which does not support right to left as seen here.

<http://forum.mootools.net/viewtopic.php?id=129>

However I my best guess is they got this in place for mootools 1.2. I would suggest going to the mootools.net forums and posting that question their. Or search their forums and you may find the golden answer!
