## Moolets Requirements FAQ

Posted by brian\_williford - 2007/08/21 00:49

---

Moolets are built on the Mootools javascript Framework library. You should only be using One framework on your site. The most popular Web 2.0 Libraries are:

Link: JQuery

Link: Mootools

Link: Prototype

Link: script.aculo.us

Installations that use those other Frameworks are highly probable. Please view source on your website and see if any other loaded modules are using any other library. If so simply turn around and walk the other way. Mixing these are not recommended.

If you are using internet explorer also please go away, comeback with Firefox.

We are giving you access to software for free, so don't complain if it does not work on your system. We did not develop anything with a load of venture capital so there is no paid staff to respond. If you do have trouble place a comment on the forums along with a URL of a page with the Moolet we will usually take a quick look.

If you have a corporate site with a paid client and the client has to have a moolet we will get whatever you want working for an hourly rate of \$125.00/hour, billed in quarter hour increments.

Thanks
