## Moolet Template Dogear 1.0.6 :: Updated 02/08/08

Posted by brian\_williford - 2007/08/26 17:01

---

Moolet Template Dogear is a very minimal Mootools based module that puts a dogear image on the top left site of your website template to specify Info like Alpha or Beta version. Additionally what version number.

Mooltools allows the dogear to drop down or slide in from the left. Then the item bounces then locks on the template left top corner. If the user gets close to the dogear with their curser the image fades out.

This is very handy for those building social networking site that are live to the public during the development phase. I have supplied a red and a blue page curl image but you certainly can use your own. The text on top the background image is added in the module admin along with some basic CSS controls.

Here are some other control parameters.

Mootools effects on / off

Mootools Effects Duration

Mootools file path in case of other moo modules (so no duplicate file added)

Dogear Text

Dogear Text Version

Dogear Text Font

Dogear Text Color

Dogear Text Size

Dogear Zindex

Absolute or Relative

CSS Top

CSS Left

Dogear Width

Dogear Height

Path to dogear image

Site Sub Directory path
