
Moolet Last Avatar 1.0.3 :: Updated 09/15/07

Posted by brian_williford - 2007/09/03 22:29

Moolet Most Active Member Avatar is a Joomla module that displays the last logged in member's user image. This image is updated in real time with Ajax and Mootools effects without page reloads. As one member sits idle and another clicks a page this avatar updates with a new avatar frmm the most recently active user.

Members without avatars are ignored as part of the intentions of this moolet widget is to entice members to upload a user image. No one likes a site littered with impersonal members hey...

This modules requires Community Builder as that would be where user avatars are tracked in Joomla.

Visit the Moolet Most Active Member Avatar page for more information.
