
Newbie Module Pos Question

Posted by CBox - 2007/09/14 09:17

Hi,
I'm quite new in matters Joomla and I've to redesign a website with Joomla (1.0.13).

Your google Maps module is great, so I installed it... no problem...
but now I want to display it as content and not below the MainMenue

So I changed the module position to cpanel. But of course it's not appearing...
So I thought to create a new menue item to just link to the google maps site.. .but of course I can't link directly to a module, just to components.

So what to do, to show the google Maps as content item?

Sorry for stupid questions.
tia

I am a little lost with your question, if you post or PM me the URL of your site I would be in a better position to help
thanks

Sorry ... I got it...
had just to install the "mosmodul mambot" to show a module as pure content. ((this I was actually looking for!)
So sorry for the poor question - problem solved so far!

Works great! :laugh:

It's quite easy if it is explained properly, so here goes...

The first step is to upload your module in the usual manner then create a new module position in:

site> template manager>module positions

Lets say we made a new position "test_pos".

Next, create a content item e.g. 'How to find us' where you want the map to appear. Don't forget to create a menu link to the content item or no-one will see the map.

Next, publish the new module to the new module position "test_pos" we created above.

Next, go to the content item in which we want the map to appear (How to find us) and in your text editor write the code below exactly where you want the map to appear:

```
{mosloadposition test_pos}
```

Please use curly parenthesis around this code.

This code will load the module published at test_pos module position.

I hope this helps.

Mark

Great Post, Thanks Mark.
I will copy that over to the Faq's in the next few days...

brian

Forgive me, but I don't see any code as mentioned in my browser as mentioned. I am using Firefox and also tried Safari.

It was below but I moved it to the FAQ like I should have before.

Here it is:

Module Positions FAQ

Thanks;

I will give it a try!

This topic is of interest to me, but in the reply to the original question, Mark Pickford posted an explanation which the admin then copied over to the FAQs. Is there something missing from this reply ? there is a blank space where the code is supposed to be. any help appreciated..

Tony,
The code below is what was missing and I copied it over to the post and fixed the link in the thread.

I guess you can PM mr bickford if you need help, he may respond.
