
Moolet Recent Visitors 1.0.1

Posted by brian_williford - 2007/10/03 21:56

Moolet Recent Visitors module displays the avatars of the last preset number of folks that have logged into your website. Unlike the moolet users online module this block of user images does not time out as members leave or logout because it reads from the last login field and not the user session table. This module is updated in real time with Ajax and Mootools effects without page reloads. Similar to the myBlogLog avatar block This modules requires Community Builder as that is where user avatars are tracked in Joomla.

Updated 10/20/2007

Added the ability for members without avatars to appear using the community builder no image image or one of your choice. This is good for very low traffic sites or sites with ugly members who fear showing themeless to others!
