## Include error?

Posted by themenace - 2007/10/15 06:22

---

Not entirely sure whats going on, but the following error shows up. (link below)

Warning: main(/modules/mod\_moolet\_online\_fb/language/english.php): failed to open stream: No such file or directory in /home/content/i/i/u/iluvteknoftp/html/modules/mod\_moolet\_online\_fb/mod\_moolet\_online\_fb.inc.php on line 70

Fatal error: main(): Failed opening required '/modules/mod\_moolet\_online\_fb/language/english.php' (include\_path='.:usr/local/lib/php') in /home/content/i/i/u/iluvteknoftp/html/modules/mod\_moolet\_online\_fb/mod\_moolet\_online\_fb.inc.php on line 70

<http://iluvtekno.com//Links/>

I only published to the links page so I will not confuse my visitors.

Thank you for your help.

Not sure what happened to the link, but here it is again:  
[iluvtekno.com/Links/](http://iluvtekno.com/Links/)

Ok, there must be some very strange mambot that changes the word links.

Well, the "links" menu on the left will get you to the right page.

I went to the site but the page was not here.

by looking at the url with "\_link\_s/" in the path my guess is you are using some SEO module that the moolets will not jive with anyway as the AJAX call my not be able to find the real page.

That is correct. I use sh404SEF. Can you confirm that this module will not work with that component?

TheMenace :)

Menace,

I can not confirm because the page you sent was not there for me. You would need to get the module posted onto a

---

page that is live that I could hit to answer the question.

There is actually something wrong with the forum on THIS site. My links page is certainly functional. the word (LINKS) is being manipulated by something on this site's forum (moolets.com forum) the Links page is linked from the menu on the left hand side of every page on iluvtekno.com. I am not sure how else to show this to you as this forum is manipulating the links.

Again, the link is <http://iluvtekno.com/Links>

This forum will add an underscore(\_) before and after the word (Links) and it will no longer have a capital "L"

I really do not want to publish the module on any other page. If you have trouble at all, you can click on the main menu link that is called links.

you are so correct. I upgraded fireboard last week and I guess that is an issue. I did see the word link with an underscore elsewhere and paid no attention to it.

mootools.js

okay. You will want to delete the moolet module, it is not going to work. You are using a URL scheme that I have never seen and is to be honest against the HTTP protocol.

You do not have a functioning page called:

<http://iluvtekno.com/Links>

But rather one called:

<http://iluvtekno.com//Links>

There should only be two slashes after the HTTP but never two slashes further down your path here like you have in your site.

So with that the moolet will never find what it needs.

Also, even if you fixed the path it will not work as the moolet requires mootools 1.1 (file included) but you are including a mootools 1.0 file with pd\_smoothgallery and that is outdated, and will wipe out the newer functions need for newer modules

sorry
