
Fatal error: main() [function.require]: Failed...

Posted by riosaeba - 2007/09/10 18:58

Help me please!

I have installed total user but after 2 second of wait i see:

Fatal error: main() : Failed opening required '/modules/mod_moolet_total_users/language/english.php' (include_path='.:') in /membri/riosaeba78/modules/mod_moolet_total_users/mod_moolet_total_users.inc.php on line 54

What can be the error?

I have not installed any ajax module...can be this the problem?

thanks

English is fine

I need to you send me a url of a page with this module turned on so I can go see whats up

thanks

Made some changes to the langauge path if you want to try version 1.0.7

Re:Fatal error: main() [function.require]: Failed.

Posted by riosaeba - 2007/09/11 09:41

My board is this: <http://www.geogg.4000.it/>

Should i upgrade the mod??

Re:Fatal error: main() [function.require]: Failed.

Posted by brian_williford - 2007/09/11 16:35

Yes,

Upgrade to 1.0.7 and let me know, then I will go back again and see.

Posted by riosaeba - 2007/09/11 20:40

There isn't the file to download,i must wait ;)

Probably someone do a maintenance

Re:Fatal error: main() [function.require]: Failed.

You have a couple of problems. There is a typo in the module path, I will go check my file. Please change this in the admin in all places needed

modules/mod_moolet_totasl_users

to

modules/mod_moolet_total_users

there is a extra "s" in total

now, this will probably never will with frames, why would anyone use frames today??

<http://www.geogg.4000.it/modules>

is really

<http://www.riosaeaba78.altervista.org/>

we should be able to get it working at

<http://www.riosaeaba78.altervista.org/>

change the path and let me know. then I will go back and check

Re:Fatal error: main() [function.require]: Failed.

Posted by brian_williford - 2007/09/14 22:54

Correct, modules/mod_moolet_totasl_users does not exist and should not. You downloaded a a bad version I had up for a few hours.

You simply need to log into Joomla admin and to your modules, then to the moolet module

admin > modules > mod_moolet_total_users

Then under Parameters, fields 2,3,4 there is a typo in your path there.

change
modules/mod_moolet_totasl_users

to

modules/mod_moolet_total_users http://www.moolets.com/components/com_fireboard/uploaded/images/path.png

:S
Same problem.
:S
I have installed 1.08.
All the path are correct.

If you want i give you my username and passw of Joomla and ftp admin.
I'm a student but i can pay you a little for this and other little help...:side:

Re:Fatal error: main() [function.require]: Failed.

Posted by brian_williford - 2007/09/15 17:49

yes
I see that is the case now. there is a new problem. the files are there and found but this one will not execute:

http://www.riosaeaba78.altervista.org/modules/mod_moolet_total_users/mod_moolet_total_users.inc.php

That would be a server PHP issue. Might send that error to your host, I can not read the error when I click the "function.require" link.

Can you translate that for me possibly?

brian

Posted by Radibux - 2007/10/16 04:12

I don't know if it's the same problem, but after I installed the 1.09, I had this message:

"Warning: main() : open_basedir restriction in effect. File(/modules/mod_moolet_total_users/language/english.php) is not within the allowed path(s): (/mnt/167/sdb/e/e/pitonline) in /mnt/167/sdb/e/e/pitonline/modules/mod_moolet_total_users/mod_moolet_total_users.inc.php on line 51"

What do I do?

Re:Fatal error: main() [function.require]: Failed.

Posted by brian_williford - 2007/10/16 15:57

Your host has open open__base_dir off in thier php.ini file

error: open__base_dir restriction in effect

you can look into overriding the host php.ini file by adding your own at root of your site but that is beyond the scope of the help we provid here. You can post for that help in he help wanted forum here or maybe google that.

sorry
