
Luvn this module!!

Posted by lee - 2007/10/17 04:46

Brian,

Just had to say a big thanks for another outstanding module.

My (test) site is looking more 22nd century than 21st, thanks to your modules. Will post it just s soon as I've finsihed snagging the SEF stuff !

Worked first time out of the tin with one of my RT templates.

Well almost, but that was due to the sub directory paths I had to change.

Also I'm now loading the latest mootools library directly through my template, and disabling the call to my other modules in the appropriate files. Touch wood everything is ticking along just fine.

A very happy punter.

Lee

Lee,

Do you have a url for where you are using this?

I get compliments here and there but I never get to see this stuff in action!

Brian,

I'm hoping you get more compliments than not !

Your work is adding yet another dimension to what was becoming a rather drab offering of modules on Joomla.

It's certainly revitalised my interest in all things joomla!

Anyway I'm almost there with the site now, so just as soon as it's done I will post a link in the showcase.

Thanks again.

Lee
