
Moolet Recent Visitors Is Here

Posted by brian_williford - 2007/10/03 21:54

Wow, I released a moolet and forgot to create a support section for it, silly me.

Check out

Recent Visitors: <http://www.moolets.com/content/view/50/157/>

brian_williford

please can you,show backend parameter

because when i try,use this module,

always error, and disappear.

i really like this module.

and appreciate your jobs.

thank you.

Parameters are different for ever template, server, etc.

Please post the module to a page and send the URL for me to check, then I Can advise

brian

I am having the same problem - see <http://www.polkadotbanner.com> - the Recent Visitors is on the home page and on the forum. The Moo's Online works perfect, but I would rather have the avatars stick around awhile after users sign off. I tried just about every option I could think of, still has the same problem. Oddly, on the home page, it tries to load then disappears, but on the forum, it stays visible and just keeps loading. Otherwise, is a great module, so I hope I can get it to work!

Jamie,

1) As far as the user staying after they log out with the current way Joomla handles log in session I can not do that. Once a user logs out there session Id id deleted from the database instantly so they are no longer there for me to read this data. I would have to copy the data or store the data in array, which is all doable but would take far more work then I want to put into an application I am giving away.

2) The whos online for the forum works differently. The Fireboard forum application is already storing the data for me after a user logs out. So you will see users stay up longer there. You may want to install that one to for just that page

3) As far as the moolet not working on that page it really should not be working at all on your site. Your template is loading a mootools 1.0 file (mootools.js) which is outdated and conflicts with the mootools 1.1 included with the moolet. YOU are not run both at the same time, which you are and is working on the home page but is breaking on the Forum like it actually should be doing everywhere.

I would turn off the mootools script in the moolet and move it to the template. Then I would replace the line of code in the template to use the update version. Then both your template and moolet are on the same page.

This may be jibberish if you are a non coder but is actually easy to do.

Let me know if need help with that

nice site!

brian

Update,
I just realized:

1) you may want to use the Moolet Recent Visitors Module instead as users going leave that pallet. For that on I just check the last login time instead of the session time. So users stay there forever until they get pushed off by more recent logins

2) Thinking about a way to merge that feature with the moolet who's online module so when the pallet is low on members to grab them from the login instead. This may be doable. I will take a look.

Brian:

I am totally Moo for Moolets. I love the way they look and they work great (I just have to work out my bugs!) Thanks for all the support and kudos for my site. Here's where I stand now...

1. I changed Recent Visitors to "last login" as you suggested.

2. I installed the Fireboard Moolet. It's in place, but not working yet. That seems to tie into the Mootools 1.0 file (mootools.js) that you mentioned. I don't think I physically downloaded this myself. However, I remembered seeing Mootools mentioned before, so checked it out. I have the Avatar Matrix Module and in the parameters, it is pulling from the above file.

I know enough to be dangerous, but not enough to be able to fix it without clear, directions. Do I need to delete the js file and if I do, will that affect the Avatar module?

Here's the part I am not clear on:

"I would turn off the mootools script in the moolet and move it to the template. Then I would replace the line of code in the template to use the update version. Then both your template and moolet are on the same page."

I now have 3 moolets (the fireboard one, the recent visitors, and moos online. Which moolet am I turning off the script in? When you say "turn it off" are you referring to the "Include Mootools JS File" in the mootools Parameters directly under the JS file path? And is the path what you want me to replace?

If you can clear that up, I should be able to get mooing.

Jamie

Update...

I don't know if this is what I was supposed to do, but, ah, well, I learn a lot by twiddling... so I dug around in the Avatar matrix folder and deleted the older version mootools, then told the Avatar module to go get it from the other folder instead.

But I don't know what else I'm supposed to do. It's still not working.

I think you got this backwards. The mootools.1.1.js that came with the moolet is the correct file and the latest file. The mootools.js that came with your template is way outdated.'

1) never delete a file, especially for a test!, just back it up. I will give you better instructions on Saturday as I have a full load today...

thank

bruin
