## Yootheme Template

Posted by valantis295 - 2007/10/20 01:19

---

I m using a yootheme template (core) on my greek site [www.cartube.gr](http://www.cartube.gr), which is about the same as your here and i use firebord forum like you but when i load the forum page all the effects (moo, java) stops working. Everything else in the site is working except the moolet (who is online) which i installed yestarday and i m still looking on my server configuration on this. Please have a look if you can and tell me what to do so the effects can work in the forum page. Your forum page with this template is working perfectly (nice effects)!!!

Sorry for my bad English.

Thanks in advance

Your template is using mootools 1.0  
My Template has been upgraded for mootools 1.1  
Moolets will not run in mootools 1.0, plus your 1.0 is not a fully packed script.

[http://www.moolets.com/component/option,com\\_fireboard/Itemid,131/func,view/catid,5/id,552/#552](http://www.moolets.com/component/option,com_fireboard/Itemid,131/func,view/catid,5/id,552/#552)

hope that sheds some light
