
Fatal error

Posted by damuro - 2007/12/04 13:07

Hi,

In my site ytudequieneres dot com i have the error,

Fatal error: Cannot redeclare class jconfig in /var/www/vhosts/ytudequieneres.com/httpdocs/configuration.php on line 2
when I publish the mod_moolet_total_user. Why?

Thanks,
damuro

hello,
I did not see a joomla at that url, only a CentOS / apache 2.0 landing page, which in my option is a great way to go.

Let me know when the Joomla is back up...

Sorry. Now my site is on-line. (I use Joomla v1.5RC3)

Re:Fatal error

Oh No!
We have not made these compatible with joomla 1.5 yet.
Probably in January, the rest of the year is slammed with end of the year budget stuff for clients

sorry

brian
