
Initial maps view

Posted by rdv - 2007/09/25 18:30

Hi,
Just installed google maps, everything is working fine, however one question: Does anybody know how to show the satellite view as initial view instead of the regular maps view?

Thx,
Roger

I have only played with the google API just enough to get as far as I did. On page mod_moolet_google_maps.php, starting on line 103 is the google map stuff. you might look at that and then look at Googles API site.

I would like to know how to change the default map view also, and also the default how far zoomed in level.

Thanks,

Tim

Might poke around here for the API Commands. I just wrote the joomla wrapper the map is in.

To change the initial view you need to open this file:

mod_moolet_google_maps.php

And change the number in this line:

```
echo "moolet_google_maps.setCenter(point, 15);\n";
```

Higher to zoom in - lower to zoom out.
